### DETAILED ACTION

Receipt of the amendments and remarks submitted June 15, 2001 is acknowledged.

#### *Claim Rejections 35 U.S.C. § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-8 and 14-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kyle (U.S. Patent 5,374,657) in view of Crozier G.L. et al. (Monatschrift Für Kinderheilkunde, Vol. 143, No. 7, 1995, page 95-98) for reasons essentially the same as set forth in the prior office action. With respect to the newly added composition claims, see, particularly, column 13-16 in Kyle

Applicants' amendments and remarks submitted June 15, 2001 have been fully considered, but are not persuasive for reasons discussed below.

Applicants' assertion that Crozier teaches away from the instant invention is not persuasive. Particularly, as stated in the summary, Crozier teaches that premature infant require a dietary source of preformed C20 and C22 long chain polyunsaturated fatty acid, essentially, arachidonic acid (AA or ARA) and docosahexaenoic acid (DHA). Crozier further suggest that the growth depress in his studies is due to the presence of EPA in the formula he used. EPA is known to have similar structure as ARA and is known to inhibit the biosynthesis of ARA. See column 1, lines 23-25. Therefore, Crozier teaches the criticality of both DHA and ARA in the dietary source for preterm infant.

Regarding applicants' remarks about "enhanced growth" and "proper growth", note the enhanced growth, as defined in specification page 5, lines 2-10, is relative to those feed with DHA only, or without DHA and ARA. The examiner' does not see a patentable distinct feature between "enhanced growth" and "proper growth".

3. In response to applicant's argument that the examiner's conclusion of obviousness is based upon improper hindsight reasoning, it must be recognized that any judgment on obviousness is in a sense necessarily a reconstruction based upon hindsight reasoning. But so long as it takes into account only knowledge which was within the level of ordinary skill at the time the claimed invention was made, and does not include knowledge gleaned only from the applicant's disclosure, such a reconstruction is proper. See *In re McLaughlin*, 443 F.2d 1392, 170 USPQ 209 (CCPA 1971).

4. In response to applicant's argument that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, the motivation to do so found both in the references and in the knowledge generally available to one of ordinary skill in the art. Particularly, the secondary reference teaches the criticality of DHA and ARA in dietary source for preterm infants.
